**“We Are Here,
You Are There”**

**The Keyhole
is the
Calendar**

this calendar/keyhole convergence is the integration of information concerning:

the gap between idealism and reality of time management

undetermined and determined activity

global audiences, targeted audiences, personnel groups and individuals

the economic and flexible use of space
and of course: the allotment of time

A photograph showing the backs of two people's heads as they look at a wall covered with pinned documents. The documents include a large yellow grid and several sheets of text. The scene is brightly lit, and the focus is on the interaction with the information on the wall.

What is the point of this calendar?

Dissemination of Information

**Mediate interaction between People
(don't try to replace it)**

**Contextual relationships between
time, processes and space**

What does this mean?!

**Future orientated Time
management in the context of
History and Location,
visualised in real time...**

or...

Defining space and time
so that everyone becomes
realtime content for
the system
